## Desired jobs:

**Junior Full Stack Web Developer**

**Customer Success Manager**

**Junior DevOps Engineer**

## SUMMARY:

Junior Full stack web Developer, with +10 years of IT experience driving digital transformation for Fortune 500 companies. Purposeful, customer success, professional focused on building strong processes to improve Customer Adoption, Retention, and Expansion. Proven record of driving customer value, increasing retention, promoting high adoption, and driving upsell and cross-sell opportunities. Holds a master's degree in Computer Engineering. Multilingual and analytical person.

## ACCOMPLISHMENTS AND ABILITIES:

- Built front-end websites from scratch, as well as using ready-made frameworks that enable you to build efficiently.
- Created full-stack single-page web applications using RESTful API routes and AJAX methods, and defined how front-end applications communicate with back-end applications and databases.
- Implemented structured and unstructured databases to convert static websites into dynamic websites that persist data.
- Applied the accepted and standard basics of social coding—including source control, issue tracking, and functional feedback—as part of a development community, while building an application.
- Demonstrated strong teamwork and project management skills as a collaborator and independent contributor during the development cycle of complex projects.
