ISMAIL SAOUDI

United States | +1 (513) 713-4001 | ismail.saoudi@icloud.com

CORE COMPETENCIES

IT Application Development • Enterprise Full-Stack Web Development • Lead Software Engineer (Player-Coach) • Idea → PoC → Production • Cloud-Native Architecture • Python • Node.js • Go (Golang) • REST APIs • Microservices • Web Applications • Google Cloud Platform (GCP) • Vertex AI • Generative AI • Agentic AI • CI/CD • DevOps • Docker • Kubernetes • YAML • GitHub • GitLab • Bitbucket • SAP Integration • MES • SCADA • OT / IT Integration • IoT • System Architecture • Technical Leadership • SDLC • Agile • Scrum • Kanban • Waterfall • Security • Reliability • Scalability • Performance Optimization

PROFESSIONAL SUMMARY

Lead IT Application Engineer and Emerging Technology Lead with 14+ years of experience delivering enterprise-grade, full-stack web applications within IT organizations. Specialized in taking ideas from concept through proof of concept (PoC) into secure, scalable, production-ready systems. Hands-on expertise in Python, Node.js, Go (Golang), microservices, REST APIs, and cloud-native architectures. Strong background in Google Cloud Platform (GCP), CI/CD pipelines, Docker, Kubernetes, and YAML-based configuration. Proven experience integrating enterprise and industrial systems including SAP, MES, SCADA, IoT, and OT platforms. Recognized as a player-coach technical leader who designs architecture, writes production code, leads PoCs, and guides engineers and vendors to deliver reliable, secure, and high-performance applications aligned with enterprise IT standards.

PROFESSIONAL EXPERIENCE

CINTAS CORPORATION

Emerging Technology Lead – IT Applications & Platforms | 2021–Present

- Led emerging technology initiatives within the IT organization, converting internal ideas into production-grade web and cloud applications.
- Owned end-to-end delivery from ideation and PoC development through secure production deployment.
- Designed and guided architecture for large-scale web applications, APIs, and cloud-native services.
- Built hands-on PoCs using Python and Google Vertex AI, including agentic AI workflows, before scaling solutions.
- Acted as technical lead for internal engineers and vendors, providing architecture guidance and code reviews.
- Led cloud application modernization on GCP, including CI/CD, observability, and reliability improvements.
- Improved application reliability and SLA compliance through automation and SRE-aligned

practices.
- Ensured integrations met enterprise IT standards for security, performance, and maintainability.

WERTH MESSTECHNIK GMBH

Application Engineer – Industrial Measurement & OT Systems | 2018–2020

- Developed and customized CMM (Coordinate Measuring Machine) software applications and measurement logics.
- Designed automated inspection workflows, GD&T logic, and rule-based measurement scripts.
- Integrated CMM applications with MES and SAP environments to enable quality traceability and reporting.
- Bridged OT systems with enterprise IT platforms to support Industry 4.0 initiatives.
- Supported production deployments by troubleshooting application logic and optimizing performance.

CYPRESS CREEK RENEWABLES

Instrumentation & Controls Engineer – OT / SCADA Systems | 2016–2018

- Integrated SCADA systems for utility-scale solar plants, connecting IoT and OT devices into centralized platforms.
- Integrated inverters, transformers, meters, data loggers, PLCs, RTUs, and sensors.
- Implemented industrial communication protocols including Modbus TCP/IP, Modbus RTU, and DNP3.
- Designed OT network architectures using industrial Ethernet, routers, switches, firewalls, and VPNs.
- Led commissioning and troubleshooting of hardware, software, and network issues prior to production handover.

HUAWEI TECHNOLOGIES

RF Integration Engineer / Implementation Manager | 2011–2015

- Integrated and commissioned LTE (4G) RAN technologies across large-scale telecom deployments.
- Developed scripts and automation for network configuration, parameterization, and activation.
- Executed large-scale hot swap and cold swap projects replacing legacy network infrastructure.
- Managed vendors and in-house teams of engineers and technicians for rollout and modernization programs.
- Oversaw deployment of network hardware and software, ensuring quality, compliance, and operational readiness.

TECHNICAL SKILLS

Programming & AI: Python, Vertex AI, Generative AI, Agentic AI, APIs
Cloud & DevOps: GCP, CI/CD, Docker, Kubernetes, GitHub, GitLab
Web & Platforms: Web Applications, Microservices, REST APIs, Architecture Design
Enterprise & OT: SAP, MES, SCADA, IoT, PLC, RTU, Modbus, DNP3
Networking & Systems: Industrial Networks, TCP/IP, VPNs, Firewalls

EDUCATION & CERTIFICATIONS

Bachelor of Engineering – Computer Systems & Telecommunications
Google Cloud Generative AI Leader | MIT Professional Education – DevOps Leadership
Cisco CCNA | Azure Fundamentals

HARD SKILLS — ENTERPRISE FULL-STACK WEB DEVELOPMENT

Frontend Engineering:
• JavaScript (ES6+), TypeScript
• React, Angular (enterprise SPA architectures)
• HTML5, CSS3, Responsive & Mobile-First Design
• State Management (Redux, Context API)
• UI Performance Optimization & Accessibility (WCAG)
• Enterprise UI Frameworks (Material UI, Bootstrap)

Backend Engineering:
• Python (FastAPI, Flask, Django patterns)
• RESTful API Design, Microservices Architecture
• Authentication & Authorization (OAuth2, JWT, SSO)
• Asynchronous Processing & Background Workers
• Business Logic & Domain Modeling

Enterprise Architecture & Integration:
• API Gateways & Service-Oriented Architecture
• SAP Integration, MES, Enterprise Data Flows
• Event-Driven Architecture (Pub/Sub, Messaging)
• IT/OT Integration (SCADA, IoT Platforms)

Cloud & DevOps:
• Google Cloud Platform (GCP)
• CI/CD Pipelines (GitHub, GitLab, Jenkins)
• Docker, Kubernetes
• Observability, Logging, Monitoring

Data & AI:
• SQL, Data Modeling
• Google Vertex AI, Generative AI, Agentic AI Systems
• AI PoC to Production Deployment

Security & Compliance:
• Secure Coding Practices
• Enterprise Authentication & Access Control
• Data Privacy & Risk Mitigation

SOFT SKILLS — ENTERPRISE IT & LEAD EXECUTION

• Technical Leadership (Player-Coach Model)
• End-to-End Ownership (Idea → PoC → Production)
• Architecture & Design Decision-Making
• Cross-Functional Collaboration (IT, OT, Security)
• Clear Technical Communication
• Mentoring & Knowledge Sharing
• Vendor & Partner Technical Oversight
• Prioritization, Tradeoff Analysis & Risk Mitigation
• Problem Solving & Systems Thinking
• Delivery Focus with Reliability Mindset

ADDITIONAL TECHNICAL & DELIVERY SKILLS (ENTERPRISE)

Programming & Backend:
• Node.js (enterprise backend and APIs)
• Go (Golang) for high-performance services

DevOps, SCM & Configuration:
• GitHub, GitLab, Bitbucket
• YAML (CI/CD pipelines, infrastructure configuration)
• Branching strategies, pull requests, code reviews

ALM & Collaboration Tools:
• Atlassian Jira
• Confluence

Delivery Methodologies:
• Agile (Scrum, Kanban)
• Waterfall
• Hybrid enterprise delivery models

Engineering Practices:
• SDLC governance
• Release management & change control
• Requirements-to-delivery traceability
